days	17																	193																																																																																																										

- EA Setup & Beam Commissioning (NO USERS)
- RP Measurements
- Standard Beam (1 spill every 10 BP = 1.2×10^{14} p/h)
x 24h (day) x 0.9 (efficiency) / 2 (10x10 mm²) ~ 1.3×10^{15} p/cm²/day
- Blown-up Beam
- High-Intensity Beam (up to design max. = 2.4×10^{14} p/h)
- Technical Stop (NO BEAM up to 36h + cooldown)
- on Wednesday: Machine Development (8:00 - 18:00)
and Access IRRAD/CHARM (9:00 - 12:00) - Beam OFF at 3:00
- CERN official holydays
